

## Sharp Embedded Terminal 8.1

MyQ is now fully optimized for Sharp multifunction printers, both on the server side and on the user-facing interactive display. What are the most notable features?

### Detailed Accounting and Reporting

The new Sharp Embedded terminal is completely redesigned, and besides improved stability it brings **detailed per-job accounting and reporting**.

MyQ system offers customers **advanced project, credit and quota accounting options**. Credit recharge is possible through an internal voucher system, but also external payment providers. Detailed reports are now available in the system as a standard but also customizable via other tools (MS Excel, BI tools etc.).

### Print Options on the Terminal

Job properties can now be **changed by the user directly on the terminal** before printing – under **“Print Options”**. The range of properties the user can change will depend on the rights set by the administrator. After logging in to the MyQ terminal and tapping on the specific job in “My Jobs”, the user can typically...

- force-print in **black-and-white instead of color**,
- select between **simplex or duplex print**,
- opt for the **toner-saving option**,
- or change the **number of printed copies**.

## Touchless Login and Print

If **Print all jobs after logging in** is enabled, the user can log in the standard way using their ID card and all ready jobs are printed immediately.

Alternatively, they can scan a QR code with the **MyQ X Mobile Client** to log in. After authentication via their smartphone, they can use the app **submit new documents and set their print options**, inspect their current quota & credit status, recharge credit directly from the app, generate a new PIN, and more.

## Personalizing the Terminal with MyQ Theme Editor

The embedded terminal app for Sharp 8.1 now supports **the option to customize the layout of the MFP's panel** for individual users or groups of users (departments).

The IT admin can **set the color of the background** (black/white) **as well as the tiles**, color-coding them by type of function, i.e. one color for scanning functions, another for copy functions etc.

A Theme editor for creating custom themes can be **downloaded from [MyQ Community](#)**. Of course, there is one ready-made theme in the MyQ installation package to fall back on.

## Easy Scan, Easy Copy and Easy Fax

MyQ's **Easy Scan** is a time-efficient function which the admin can set so that a single click on the terminal icon **launches an entire workflow**. The document is scanned and sent to the desired destination – the user's e-mail, folder or cloud storage.

## Advanced Scanning Options

MyQ enhances the scanning options using **custom scan parameters or metadata** which can be added automatically, manually or selected from pre-defined list or codebook to use with e.g. document management systems. Users will also benefit from a possibility to use built-in or external OCR engines, which **convert scanned documents into searchable PDFs or editable MS office formats**.

## Convenient Guest Accounts

The use of a Guest Account can now be enabled in a terminal's configuration profile. Guests, i.e. people without a MyQ user account, **can simply press the guest account icon on the terminal and do any of the allowed actions.**

---

## Out-of-network Printing

MyQ customers can benefit from several out-of-network options when they wish to print. **Web upload** supports managing files in the browser, and **e-mail print** can even be done from a smartphone on the go. Thanks to **MyQ's connector to Universal Print by Microsoft**, customers can also print from anywhere, as long as they are connected to the internet and authenticated by the Azure AD.

## Certified Web UI Accessibility

MyQ's main focus is on users, and in terms of accessibility this means **supporting user equality**. For those with disabilities (such as visual or motor impairments) MyQ X 8.2 brings great improvements of the MyQ server web UI. MyQ meets the strict requirements of **Web Content Accessibility Guidelines (WCAG) 2.1** level AA, as confirmed by BITV certification. MyQ is the **first print management solution** to receive this certificate.

Focus on what you do best... and leave us the rest!
